

Enterprise Architecture – Noon Delivery Optimization

Applied TOGAF ADM framework to analyze delivery challenges and propose solutions to reduce delivery time. Developed Value Chain and Business Footprint diagrams and designed an enterprise architecture roadmap.

IS340T: Enterprise Architecture

Enterprise: Noon

Project: "Reducing Delivery Time"

EA Framework

3. Preliminary phase

Scope: This EA project focuses on Noon's logistics and delivery services.

Governance: DeliverEdge oversees all phases and documentation.

Maturity Assessment: Noon possesses advanced logistics technology (such as Noon Express), but it lacks dynamic collaboration with partners.

Gaps include: no real-time logistics integration, an imbalanced warehouse, and limited visibility.

Resolution Strategy: Use real-time APIs, increase warehouse locations, and improve route planning.

4. Phase A

Vision: A speedier, real-time, integrated delivery system that ensures efficiency: - Reduce delivery time in large cities.

Improve tracking accuracy and automate warehouse activities.

Figure 1 Value Chain Diagram

5. Phase B

Current State: Manual planning of delivery routes, centralized control of dispatch operations, limited network of distribution hubs.

Target State: automated route planning, several regional distribution centers, real-time coordination and updates.

Business Capabilities:

- managing customer orders
- Handling dispatch processes
- Monitoring shipment status
- providing customer assistance
